

Identifiability and history-dependence audits of the 13-parameter Markov formulation

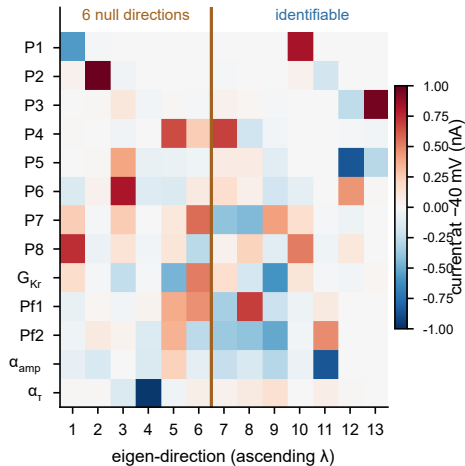

13-parameter Markov formulation, 4 protocol families

condition number $\chi = 7.4\text{e}+12$

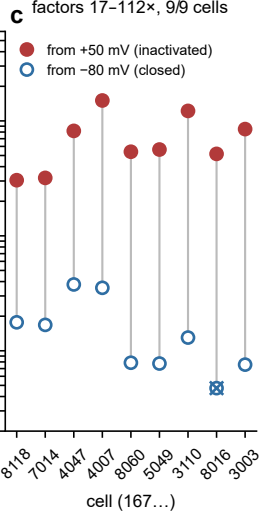

b

eigenvector loadings (signed)
all coordinates $\log_{10}$ except Pf2 (linear)

same voltage, different history (model-free probe)

factors 17–112 $\times$, 9/9 cells

x: closed-history current crosses zero (sign unstable), |value| plotted
